This is to confirm that

Filiz Can

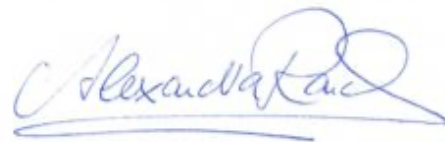

contributed as a member of the Development Group for Dementia to the Development of World Health Organization's (WHO) Package of Interventions for Rehabilitation (PIR). The PIR will be a WHO resource containing information on evidence-based interventions for rehabilitation that will support member states with relevant information to facilitate the integration of rehabilitation in all service delivery platforms in countries, with a specific focus on the low- and middle resource context.

Members of a health condition-specific Development Group are responsible to a) agree on the inclusion of evidence-based rehabilitation interventions in the PRI identified from clinical practice guidelines and systematic reviews in a previous step, b) identify target areas and interventions not addressed in this list and relevant to be considered in the PRI (if applicable), and c) agree on the resources required to provide each of the selected interventions, time required for the provision of interventions and the service delivery platforms where interventions should be available. They work together in a multi-professional team representing all WHO regions and relevant professions.

WHO Rehabilitation Programme expresses its appreciation and thanks for the participation in the Development Group.
